NODO DANCE

MASTER BRAND BIBLE & AI CONTEXT MANUAL | VERSION 2.0 | NOVEMBER 2026

Connecting the Dance Community.

A consolidated reference for branding, marketing, product design, engineering, and AI collaborators. Charlotte, North Carolina is the launch market. The original logo shown above is the authoritative brand asset.

Brand status note: Product details combine the founder’s documented decisions, supplied interface screenshots, and a prior public-site review of nododance.com. Interactive features and code behavior have not been independently retested for this edition.

01 | Identity and purpose

What Nodo is. Nodo Dance is a community-powered discovery and services marketplace for partner dancing. It brings dancers, instructors, DJs, organizers, schools, and venues together in a searchable local ecosystem.

Name. “Nodo” means “node” in Spanish. People, venues, classes, and events form the interconnected nodes of a dance scene.

Mission. Make discovering, participating in, and growing local partner dance communities easier.

Vision. Become the leading discovery and coordination platform for partner dance communities worldwide.

Core promise. Find where to dance, discover who teaches, and connect with your local scene.

VC elevator pitch

Nodo Dance is a city-by-city discovery marketplace that centralizes partner dance events, instructors, and venues into a structured, searchable platform—transforming fragmented local communities into scalable digital infrastructure.

02 | Problem and audiences

Dance discovery is scattered across Instagram, Facebook, WhatsApp, studio sites, and word of mouth. Newcomers miss events; instructors struggle to reach people outside existing followings; organizers repeat promotion across disconnected channels.

Audience	Primary need
Dancers	Find relevant socials, classes, workshops, and festivals by style, date, and location.
Instructors and DJs	Become discoverable, present credentials and services, and receive inquiries.
Organizers and schools	Publish accurate event information and reach more local dancers.
Venues and scene builders	Participate in a connected, visible local dance ecosystem.

03 | Positioning

Category: Partner dance discovery and community marketplace. Launch: Charlotte-first, with a city-by-city expansion strategy. Personality: sophisticated, modern, welcoming, reliable, and culturally aware.

Nodo is not a nightclub flyer page, a generic blog, or primarily a social feed. It is a functional discovery layer that makes real-world participation easier.

04 | Product ecosystem

Pillar	Current product direction
Discover Events	Search events with synchronized Calendar, List, and Map views; filter by dance style and event type.
Find Dance Professionals	Instructor directory and profiles; discovery of teachers and DJs.
Grow Your Dance Business	Free instructor onboarding and event submissions; future paid tools and service opportunities.

Event types shown in supplied UI

Social; Tango Social (Milonga); Group Class; Workshop; Festival. Preserve the precise visible name “Tango Social (Milonga)” in user-facing documentation.

Dance communities represented

Salsa, Bachata, Kizomba, Tango, Zouk, and other genres. The reviewed homepage also presents Cumbia, West Coast Swing, Carolina Shag, Balboa, Ballroom, and Country Line Dancing. Nodo must not be framed as Latin-dance-only.

Website observations

• Public homepage messaging includes “Charlotte, NC’s Partner Dance Hub” and entry points for Find Instructors, Explore Events, and Become an Instructor.

• The public instructor experience includes search and filtering by relevant attributes, with a DJs section.

• Onboarding messaging emphasizes free profiles, inquiries, earnings, and availability; a Websites offering is also visible in navigation.

05 | Brand identity and visual system

The official symbol depicts abstract partner dancers using connected circular nodes and flowing dark linework. A coral/orange/magenta gradient highlights a node and the circular “o” element in the wordmark. Preserve the original proportions and geometry.

Role	Color / usage
Primary dark	Deep navy ~ #19213F — headings, wordmark, structure.
Base	Warm off-white ~ #F5F5F3 and white — backgrounds, cards, whitespace.
Accent	Coral → orange → magenta gradient — CTAs and select brand highlights.

Color values above are approximations inferred from the supplied logo and UI; verify against original source files before codifying design tokens. Use Satoshi or a close geometric sans-serif; prioritize clear hierarchy, whitespace, and restrained decoration.

06 | Semantic dance-style colors

Dance style	Hex	Purpose
Salsa	#E85D5D	Warm red
Bachata	#F4A261	Soft amber
Kizomba	#6C63FF	Indigo
Tango	#2F3E46	Charcoal blue
Zouk	#00B4D8	Teal
Other	#9CA3AF	Neutral grey

Use one centralized color mapping for map pins, calendar tiles, list cards, and filter indicators. Color by dance style rather than event type. For multi-style events, use a primary style color unless a richer treatment is explicitly designed.

07 | Voice and content guidelines

Voice: professional, warm, concise, inclusive, and assured. The brand should feel like a premium software company built by people inside dance culture.

• Preferred: “Discover socials, classes, and workshops near you.”

• Preferred: “Your city’s dance scene, all in one place.”

• Avoid exaggerated superlatives, nightclub-flyer aesthetics, aggressive hype, and unsupported market leadership claims.

Tagline options

Connecting the Dance Community. • Discover Where to Dance. • Find Your Rhythm. • Where the Scene Lives.

08 | Product and engineering principles

• One event dataset: Calendar, List, and Map share the same source, approval rules, search, and filters.

• One-off by default: Events recur only when the organizer explicitly enables repeating cycles. Numeric recurrence fields are validated only for recurring events.

• Address resilience: Keep original suite/unit details for attendees; geocode the full address, then retry without unit details if needed.

• Time semantics: “This Month” is the current calendar month; “Next 30 Days” is a distinct rolling period.

• Moderation: Community submissions are reviewed before publication.

• Reliable geography: Events with missing coordinates must not silently disappear from non-map discovery.

Previously discussed stack: Next.js, TypeScript, Tailwind, Prisma, Neon PostgreSQL, passwordless/Google authentication, and Cloudinary. Verify the actual repository before changing implementation.

09 | Growth and monetization roadmap

Stage	Strategic objective
1 — Discovery density	Establish Charlotte event coverage, onboard instructors, and build weekly repeat usage.
2 — Marketplace	Test featured events, premium profiles, school subscriptions, bookings, and festival promotion.
3 — Community network	Explore profiles, follows, favorites, venue connections, and attendance features.
4 — Intelligence	Provide trustworthy scene analytics and geographic insights with appropriate data permissions.

These are planned opportunities, not assertions of shipped capabilities or validated revenue.

10 | Master AI operating directive

Use the following instructions when working with Nodo Dance in Claude Code, ChatGPT, NanoBanana, Higgsfield, or other AI tools.

Identity: Nodo Dance is a Charlotte-first, community-powered discovery marketplace for real-world partner dance. Its mission is to connect fragmented dance communities through organized, accessible discovery.

Audiences: Dancers, instructors, DJs, schools, event organizers, venues, and local scene builders.

Design: Follow the official supplied logo; deep navy, warm white, restrained coral/orange/magenta accents; modern geometric typography; clear SaaS-style information architecture.

Product: Protect synchronized Calendar, List, and Map discovery; dance-style semantics; instructor discovery; moderation; and accurate event data.

Communication: Clear, sophisticated, approachable, and community-centered. No exaggerated hype, fabricated metrics, or invented partnerships.

Execution: Distinguish what exists now from planned features. Inspect the current codebase before altering schema, validation, navigation, styling, or database behavior. Preserve the exact “Tango Social (Milonga)” display label.

North-star behavior: Make Nodo the natural place to answer “Where can I dance tonight?” and to discover the people building a local scene.

11 | Source and verification notes

Primary references: founder-provided executive summary and brand decisions; supplied Nodo logo; supplied screenshots of event submission and event calendar; previous public-site review of https://nododance.com/. This document is a consolidated working manual, not a live technical audit.

Pending verification for future revisions: exact logo hex values and font assets, production route inventory, current event data/filters, feature availability, instructor booking behavior, and website service scope.
